## Indxx Disruptive Technology Index: 10 on 10

---

### Introduction

Indxx has released an extensive [white paper](#) on the Indxx Disruptive Technologies Index (the “Index”), which has been licensed as the underlying index for the ALPS Disruptive Technologies ETF (CBOE: [DTEC](#)) as well as other index-tracking products globally.

The Index (ticker: [IDTEC](#)) is based around companies that enter traditional markets with new digital forms of production and distribution, are likely to disrupt an existing market and value network, displace established market leading firms, products and alliances and increasingly gain market share.

Indxx has identified the following 10 sub-themes to be most relevant to the disruptive technologies theme, and each receives an equal 10% weight in the index during each rebalance period:

1. 3D Printing
2. Clean Energy & Smart Grid
3. Cloud Computing
4. Cybersecurity
5. Data & Analytics
6. FinTech
7. Healthcare Innovation
8. Internet of Things
9. Mobile Payments
10. Robotics & Artificial Intelligence

In the whitepaper, Indxx provides an introduction into each of the 10 disruptive sub-themes that are the building blocks of the Index, while also providing insights into the companies within each sub-theme. The white paper itself may be useful reading for anyone interested in learning more about any of the sub-themes within the Index, or the Index overall.

“We believe that equally-weighting disruptive technology themes and companies within a single fund can help lower volatility and increase risk-adjusted returns for investors”, said Andy Hicks, Senior Vice President, Director of ETF Portfolio Management & Research at ALPS.

“We built this Index in 2017 with a focus on identifying technologies that were disrupting lives and businesses,” said Rahul Sen Sharma, Managing Partner at Indxx. “Since we launched the Index, disruptive technologies have continued to become even more vital in the daily lives of people around the globe and have also become an essential part of almost every kind of business. Companies worldwide rely on emerging technology to drive their innovation, strategy, and increase competitive advantage, and we are proud that we have successfully targeted these areas via an index-based approach that has been live for a number of years now.”
